Site Tracker

User Manual

Live crew tracking and geotagged site photos - for site owners and field workers.

Inside

1 Getting started - install, sign in, permissions
2 For workers - sharing, camera, photos, profile
3 For owners - live map, crew, photos, activity
4 Privacy, shared phones and your data
5 Known limitations in this version
6 Troubleshooting and quick reference

Android app | Version 1.0 | September 2026

OVERVIEW

What Site Tracker does

Site Tracker keeps a site owner and their field crew connected: the owner sees where everyone is on a live map, and every photo or video a worker takes is stamped with the exact place and time it was taken.

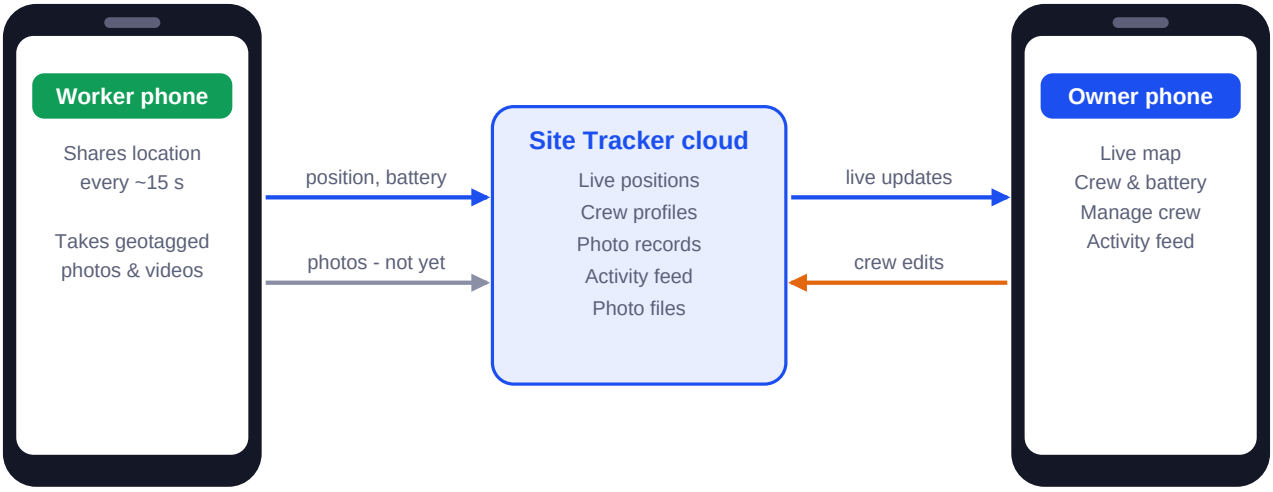

Figure 1 - Worker phones send their position to the cloud and the owner sees it live. Sending photos (grey arrow) is not available yet - see Section 5.

Every screenshot in this manual is a real photo of the app taken on an Android phone during testing - not a mockup or illustration - so the buttons and screens you see here are exactly what you'll see on your own phone.

One app, two experiences

Everyone installs the same app. What you see after signing in depends on your account: **workers** get a four-tab app for sharing location and taking photos; **owners** get the management view.

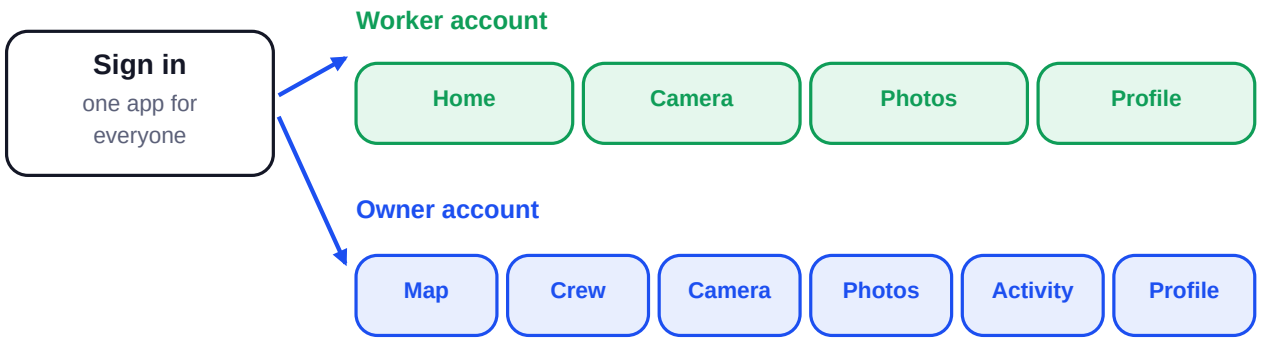

Figure 2 - The tabs each type of account sees.

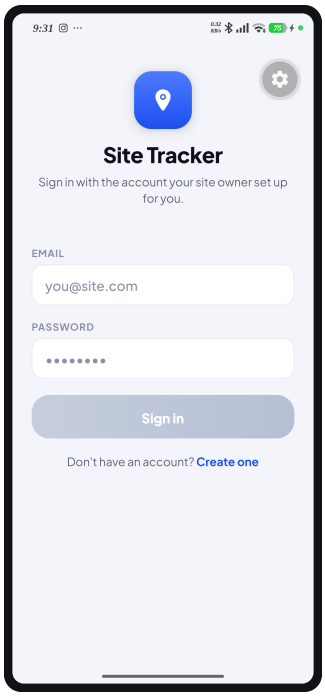
This is version 1.0 and some features are not working yet - most importantly, photos cannot be uploaded to the owner yet. Everything that isn't working is listed in **Section 5 - Known limitations**, and marked where it appears in this manual.

SECTION 1

Getting started

1.1 Install and sign in



The sign-in screen

1. Install **Site Tracker** on your Android phone from the link your company sent you.
2. Open the app and enter the **email** and **password** your site owner gave you.
3. Tap **Sign in** once. The button shows a spinner until you are fully signed in - there is no need to tap again.
4. New worker without an account? Tap **Create one**, enter your name, email and a password (6+ characters). New accounts always start as **workers**.

> If sign-in fails, the app tells you why - for example a wrong password, no internet connection, or an account that has been deactivated by your site owner.

1.2 Permissions the app asks for

The first time you use each feature, Android asks for permission. Please allow them - here is exactly what each one is used for:

> **Changed your mind?** Open your phone's **Settings > Apps > Site Tracker > Permissions** and switch a permission on. For location, choose **Allow all the time**.

Permission	Why Site Tracker needs it	If you say no
Location - *Allow all the time* (and notifications)	Shares your position with your owner while you work, even with the screen off, and tags each photo with where it was taken. A small notification shows while sharing is on.	Your owner can't see you, and the camera can't tag photos.
Camera (and microphone)	Taking site photos, and videos with sound.	The Camera tab won't open.
Photos and videos	Saves a copy of each capture into a **Site Tracker** album in your gallery, and finds them again if you reinstall the app.	Captures stay inside the app only.
Physical activity	Tells walking apart from driving more accurately.	The app estimates it from your speed instead.

SECTION 2

For workers

Your part is simple: keep location sharing on while you're working and take photos with the app's camera. (Uploading photos is not available yet - see Section 5.)

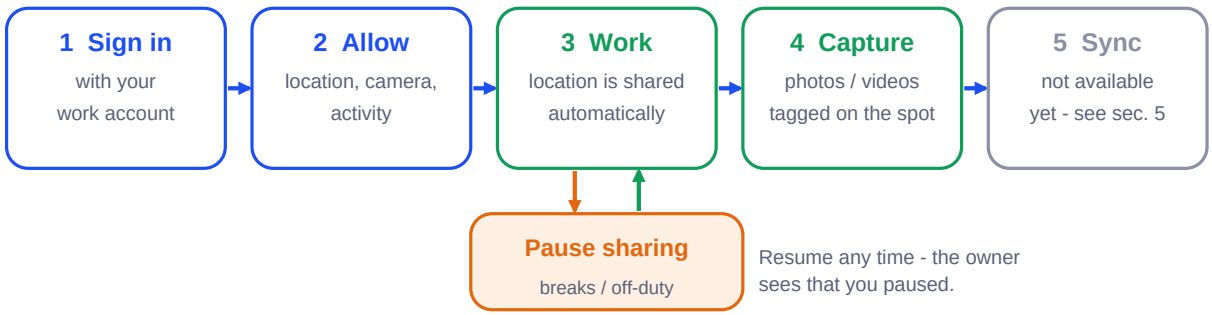


Figure 3 - A worker's day in Site Tracker.

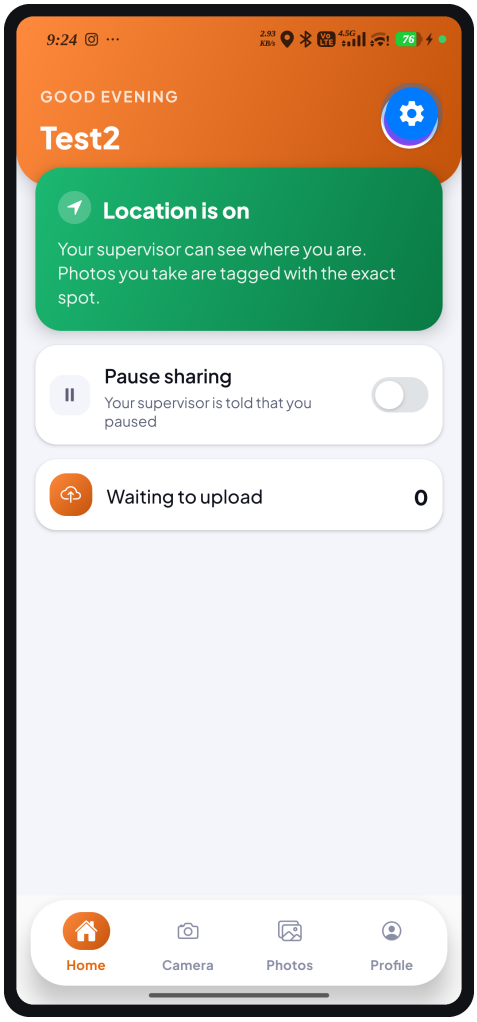
2.1 Home - your sharing status



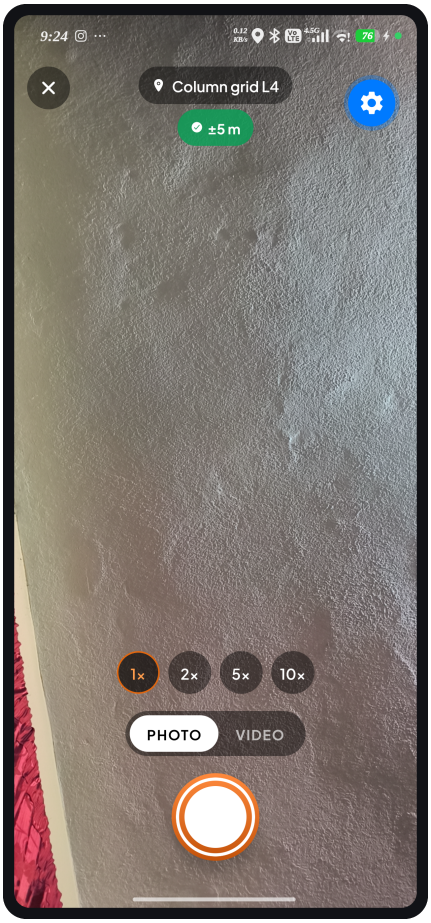
Worker Home tab

The Home tab shows at a glance whether you're being tracked:

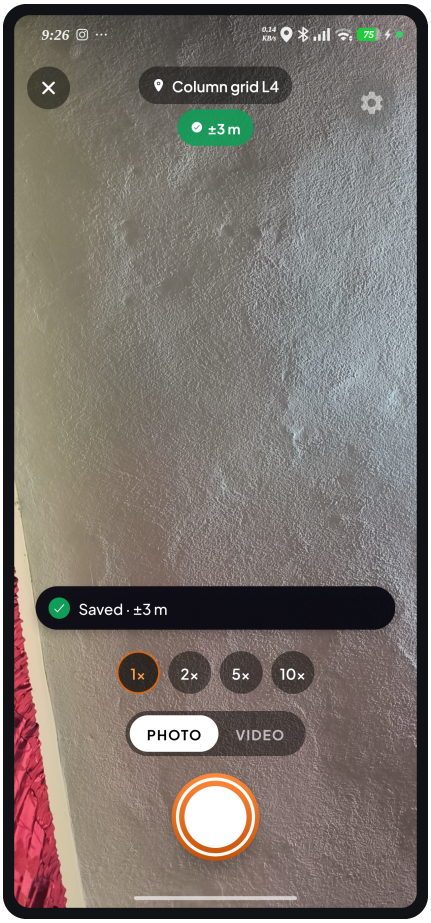
Card	What it means
Location is on	Your owner can see where you are, and your photos are tagged with the exact spot.
Pause sharing	Turn this on for breaks or when you're off duty. Your owner sees that you paused and your last position. Turn it off to resume.
Waiting to upload	How many of your photos and videos haven't been uploaded yet.

While sharing is on, Android shows a small **'Site Tracker is sharing your location'** notification. That's normal - it keeps tracking reliable with the screen off.

2.2 Camera - geotagged photos and videos



Ready: the green badge shows GPS accuracy



Saved: confirmation with the accuracy

1. Open the **Camera** tab. The label at the top is the task the photo is filed under.
2. Wait for the GPS badge. **Locking GPS...** means the phone is still finding you; the shutter unlocks once you have a fix. A **green** badge (e.g. **+/-5 m**) means an accurate location.
3. Choose **PHOTO** or **VIDEO**, and a zoom level (1x, 2x, 5x, 10x). Tap the screen to focus.
4. Press the round shutter button. For video, press again to stop (clips are up to 30 seconds).
5. A **Saved** message confirms the capture. It's stored on your phone immediately - even with no internet.

First photo only: Android may ask to allow Site Tracker to save into your gallery. Tap **Allow**. For the most accurate tag, take photos outdoors and wait for a green badge.

2.3 My photos - uploading

Worker 'My photos' tab

Every capture you take appears here, newest first, with its task, coordinates, accuracy, a short location code, and the time.

Label	Meaning
QUEUED	Saved on your phone, not uploaded yet.
SYNCED	Uploaded - your owner can see it.
Low accuracy - retake?	The location was imprecise; consider taking it again.

Not working yet: uploading. The **Sync now** button does not upload photos in this version - your photos stay **QUEUED** and the owner can't see them yet. Tapping it may show an upload error. Nothing is lost: every photo stays saved on your phone and in the **Site Tracker** gallery album, ready to upload once this is enabled.

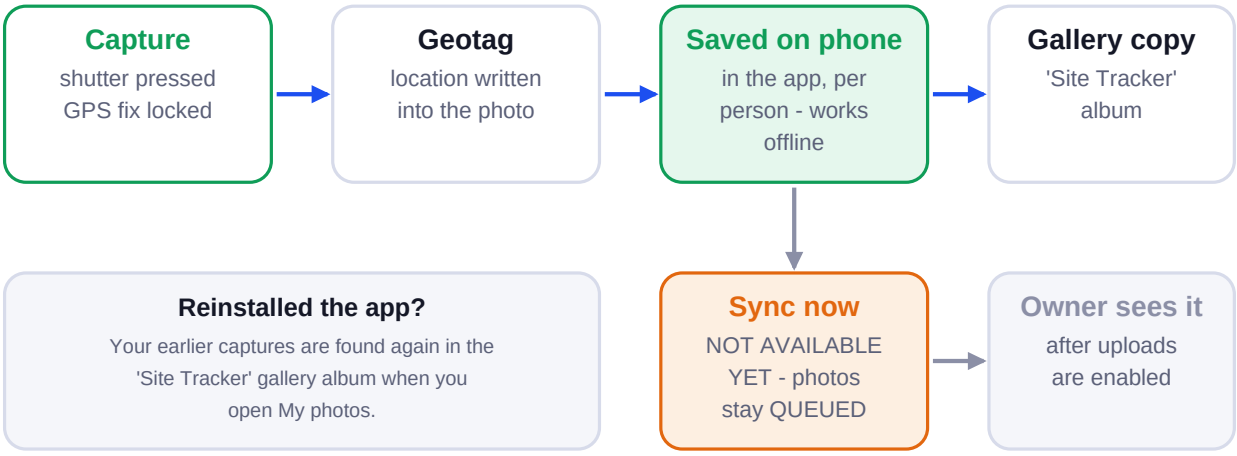


Figure 4 - What happens to a photo. The upload step (orange) is not available yet.

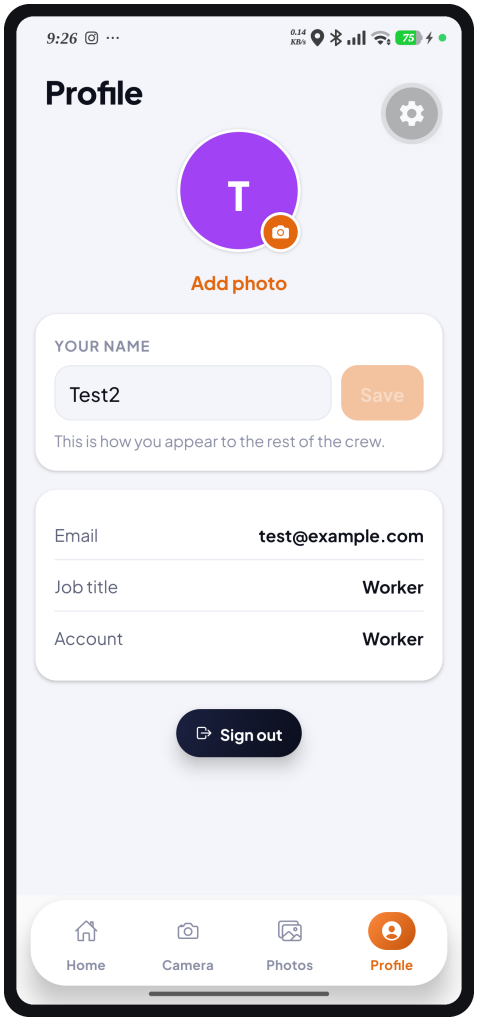
2.4 Profile



Worker Profile tab

Your name, photo and account details.

Field	What it's for
Your name	Type a new name and tap **Save** - this is how you appear to your owner and the rest of the crew, e.g. in the Crew list and Activity feed.
Add photo	Sets a small profile picture, shown instead of your initials.
Email / Job title / Account	Set by your site owner - not editable here.

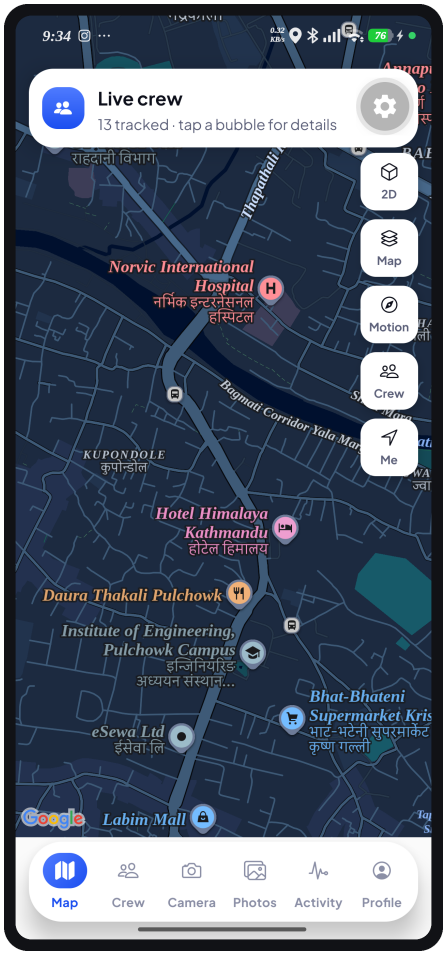
Sign out is at the bottom. Your saved photos stay on the phone and come back the next time you sign in - see Section 4.

SECTION 3

For owners

The owner view has six tabs: Map, Crew, Camera, Photos, Activity and Profile. Everything updates live while the app is open.

3.1 Map - where everyone is



Owner Map tab

The map opens as a flat overview centred on your crew. Each person appears as a coloured bubble with their initials, with a fading trail showing where they've just been; tap a bubble to see their details and follow them. The header shows how many people are tracked.

Button	What it does
2D / 3D	Switch between a flat map and a tilted 3D view with buildings.
Map	Change style: standard, satellite, hybrid or terrain.
Motion	Steer the map by turning and tilting your phone.
Crew	Zoom back out to show the whole crew.
Me	Centre the map on your own location.

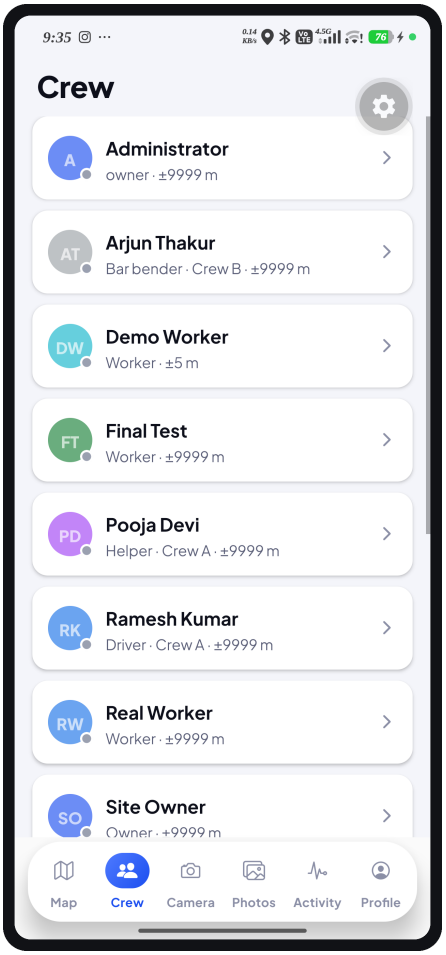
> If nobody has shared a location yet, the map opens over a default area until they do.

Status colours

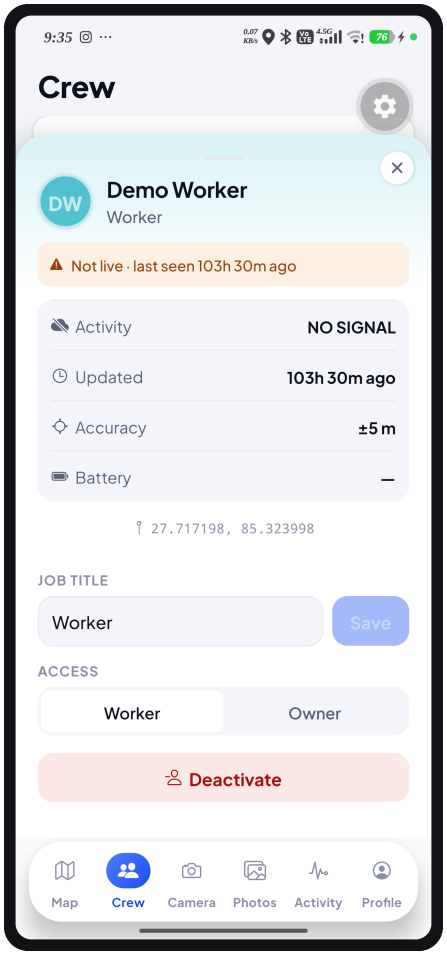
- **In vehicle** — driving or riding
- **Walking** — moving on foot
- **Stationary** — not moving
- **No signal** — no update for 3+ min

A person who hasn't sent an update for about 3 minutes is shown as **No signal** with their last known position, so a stale point is never mistaken for a live one.

3.2 Crew - details and managing people



Crew list



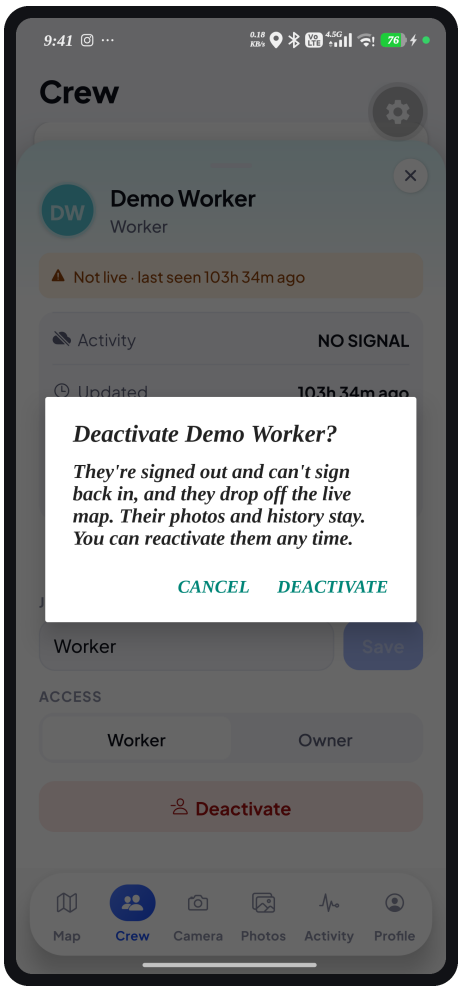
A person's card

Tap anyone in the list to open their card. The top half shows live details: activity, when they last updated, location accuracy, **phone battery**, and coordinates. A banner warns you if they aren't live. The bottom half lets you manage them:

Control	What it does
Job title	Type a new title (e.g. 'Mason - Crew A') and tap **Save**.
Access: Worker / Owner	Promote someone to owner (they get the management view) or back to worker. You're asked to confirm. Takes effect the next time they open the app.
Deactivate / Reactivate	Stops someone using the app, e.g. when they leave. Their photos and history are kept, and you can reactivate them at any time.

> You can't change your own access or deactivate yourself - so an owner can never lock themselves out by mistake. Every change you make is recorded in the **Activity** tab.

Deactivating someone



Confirming a deactivation

Deactivating asks for confirmation first, and explains exactly what happens to the person.

> Deactivation takes effect the next time the person opens the app. It does not delete their account or any of their photos.

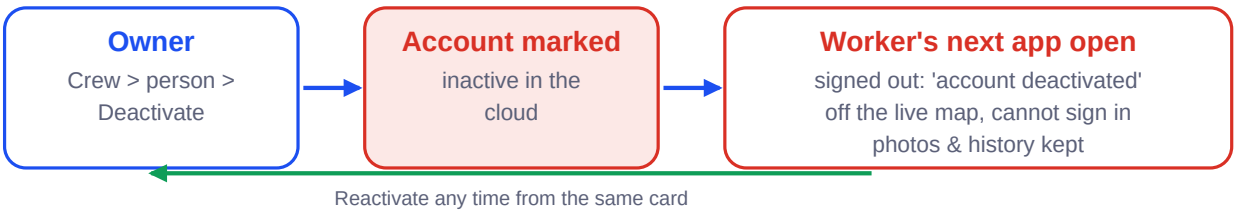


Figure 6 - What deactivating someone does.

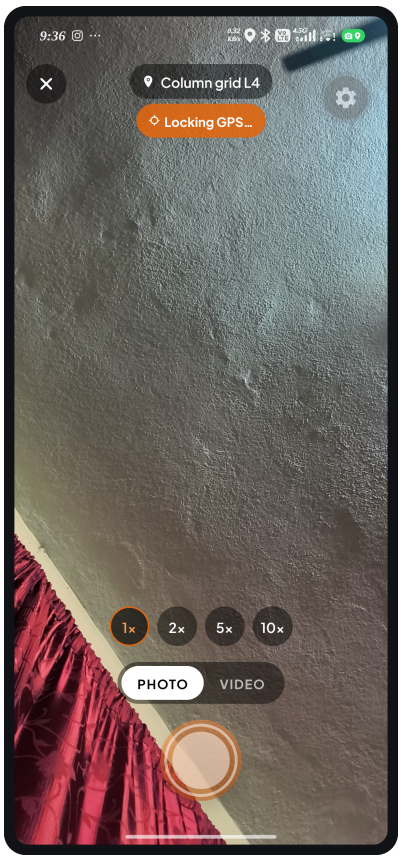
3.3 Camera



Owner Camera tab

An owner's account gets the same **Camera** tab as a worker - the app doesn't stop you taking your own geotagged photos on site.

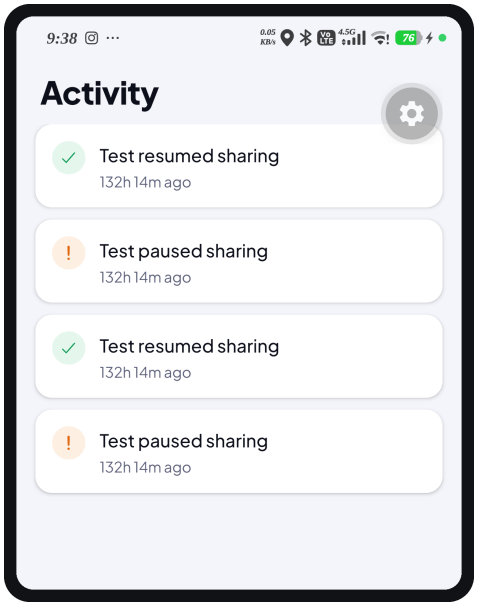
> The controls work exactly as described in Section 2.2 for workers: wait for a green GPS badge, choose PHOTO or VIDEO, and press the shutter.

3.4 Photos

The owner Photos tab is meant to show every **uploaded** photo and video from the whole crew, with who took it, the task, where and when. It shares the same list layout as the worker **My photos** tab shown in Section 2.3.

> **Not working yet:** because uploading isn't available in this version, this tab stays **empty** ('No photos yet'). Workers' photos are safely stored on their own phones in the meantime.

3.5 Activity - the live feed



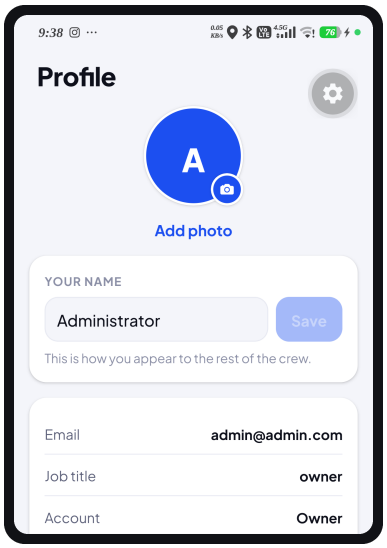
Owner Activity tab

A running log of what's happening on site, newest first:

Icon	Examples
Green tick	Someone resumed sharing; a crew change was made (job title, access, deactivate).
Orange !	Someone paused sharing; a phone battery is low (20% or less).

Not working yet: alerts are not pushed to your phone when the app is closed - open the Activity tab to catch up. Photo-upload entries don't appear yet either.

3.6 Profile



Owner Profile tab

The same Profile tab as workers get (Section 2.4): edit your name and photo, and see your account type - **Owner** - and email.

For the account administrator: change the shared owner login's password here (via your phone's account settings) before rolling the app out to your crew - see the note at the end of Section 6.

SECTION 4

Privacy, shared phones and your data

Question	Answer
Who can see my location?	Only owners of your company's Site Tracker, while sharing is on. When you pause, they see that you paused and your last position.
Who can see my photos?	In this version, only you (uploading isn't available yet). Once uploads are enabled, owners will see the photos you upload. Other workers never see your photos in the app.
Several workers share one phone?	Each person's photos are kept separately inside the app - signing in as someone else never shows or erases your captures. **But** the copies in the phone's gallery ('Site Tracker' album) can be opened by anyone holding the phone.
What if I sign out?	Your photos stay on the phone and come back when you sign in again.
What if the app is uninstalled?	Your photos remain in the **Site Tracker** gallery album. After reinstalling and signing in, open **My photos** and they're listed again. Keep the gallery copies: until uploads are enabled they are the only backup.
Is my battery level shared?	Yes - owners see each phone's battery level so they know when someone's phone is about to die.

SECTION 5

Known limitations in this version

Site Tracker 1.0 is an early release. The features below are not working yet or only partly work. They are listed here so nothing comes as a surprise.

Feature	Status in version 1.0	What this means for you
Uploading photos (Sync now)	**Not working**	Photos stay on the worker's phone, marked QUEUED. Owners can't see them, and the owner Photos tab stays empty. Photos are not lost - they are kept on the phone and in the Site Tracker gallery album.
Alerts when the app is closed	**Not working**	Owners are not notified on their phone. The Activity feed updates only while the app is open.
Deactivating a worker	**Partial**	Takes effect the next time they open the app. A worker who is already signed in keeps sharing until then.
People with no location yet	**Display issue**	In the Crew list, someone who has never shared a location shows '+/-9999 m' instead of 'no location yet'.
iPhone	**Not available**	This version is for Android phones only.

Everything else described in this manual - sign-in, live location sharing and pausing, the live map, geotagged photos and videos saved on the phone, crew management, battery levels and the Activity feed - works in this version.

SECTION 6

Troubleshooting

Problem	What to do
'Email or password is incorrect'	Check the spelling; passwords are case-sensitive. Ask your site owner to confirm your login.
'This account has been deactivated'	Your site owner has turned your account off. Ask them to reactivate it.
'Couldn't load your profile'	Check your internet connection and sign in again.
Camera shows 'Locking GPS...' for a long time	Go outdoors or near a window, make sure Location is on, and wait a moment. The shutter unlocks once a fix is found.
Owner can't see me on the map	Check that **Pause sharing** is off, Location is set to **Allow all the time**, and battery saver isn't restricting Site Tracker (Settings > Apps > Site Tracker > Battery > Unrestricted).
Photos not appearing for the owner	Expected in this version - uploading is not available yet (see Section 5). The photos are safe on the worker's phone.
Photos not saved to the gallery	Allow 'Photos and videos' in Settings > Apps > Site Tracker > Permissions.
Map is blank or grey	Check the internet connection; map tiles need data to load.

Quick reference

I want to...	Go to
Stop being tracked on a break	Home > Pause sharing
Take a geotagged photo or video	Camera
Upload my photos	Not available yet (see Section 5)
See where the crew is	Map (owner)
Change someone's job title or access	Crew > tap the person (owner)
Remove someone who has left	Crew > tap the person > Deactivate (owner)
See what's been happening	Activity (owner)

For the account administrator: the owner login you received is a shared starting account. Please change its password before rolling the app out to your crew.
